

## In summary –

Cessna Aircraft Company has changed the world of aviation. From its very start, Clyde Cessna’s vision for mono-wing aircraft changed how many pilots flew. The fact that many of the aircraft portrayed in this nostalgic look back are still flying is a testament to the design, craftsmanship, and pilot enjoyment they provided.

Each of the aircraft is special and I hope that this look back may have rekindled some old stories. I know it has for me. So many Cessna aircraft evolved from the model 140 – the 170, then the tricycle gear of the 172 which grew into the larger and more powerful 182. Cessna’s retractable gear and dual engines helped the family grow even larger, faster and safer.

Today’s Cessna aircraft continue the traditions started in the earlier days but given time, today’s aircraft will become eligible for a nostalgic look back at a longer period of the middle years of Cessna.
